Straw-bale construction is a building method that uses bales of straw (commonly wheat, rice, rye and oats straw) as structural elements, building insulation, or both. This construction method is commonly used in natural building or "brown" construction projects. Research has shown that straw-bale construction is a sustainable method for building, from the standpoint of both materials and energy needed for heating and cooling.

Hold on, isn't straw a flimsy and flammable building material?
No! In fact, there are several advantages to building with
straw that make it a superior, green, and safe part of your
home's construction. You don't use the straw as the primary
building material, but you use compressed straw bricks as
insulation that you cover it clay. This material rivals any
traditional insulation.
