Cardiovascular -
Barts Health NHS
Trust

A cardiac
catheterisation,
or coronary
angiogram, is a
special test to
find out if you
have any
problems with

Access Free Cardiology And

the coronary arteries (blood vessels that supply the heart muscle with oxygen), and to find out how well the pumping chambers and valves in your heart are working. A cardiac catheterisation

Access Free Cardiology And

will give your
doctor
information
about your heart
that they cannot
always get from
other tests.

Cardiac
catheterisation
- Cardiology |
BMI Healthcare

Cardiac

Access Free Cardiology And

Catheterisation
is a procedure
in which a very
thin plastic
catheter is
passed into the
chambers of the
heart. The
catheter can
also be passed
into the main
blood vessels of
the heart (the
coronary

Access Free Cardiology And (Arteries) .

Catheterisation Cardiac The Essential Catheterisation.

Heart problems;
information |
Patient

During cardiac
catheterization,
a long thin tube
called a
catheter is
inserted in an
artery or vein

Access Free Cardiology And

in your groin,
neck or arm and
threaded through
your blood
vessels to your
heart. Using
this catheter,
doctors can then
do diagnostic
tests as part of
a cardiac
catheterization.
Some heart
disease

Access Free Cardiology And

treatments, such as coronary angioplasty and coronary stenting, also are done using cardiac catheterization.

Cardiac
Catheterisation
Many children

Access Free Cardiology And

will need a
"Catheter Test".
This is carried
out in a special
Xray room -
called "The
Catheter Lab"
(or 'Angiography
Suite'). The
test is
performed under
an anaesthetic
for most young
children, though

Access Free Cardiology And

for some older patients it can be carried out with a local anaesthetic.
