Track geometry degradation at ballasted high-speed lines depends on traffic, running speed and axle load of vehicles. These parameters have been identified as key-factors by theoretical studies and experience of lines in operation.

Track deterioration in high-speed railways - Global ...

Abstract. Increased demand for railway transportation is creating a need for higher train speeds and axle loads. These, in turn, increase the likelihood of track degradation and failures. Modelling the degradation behaviour of track geometry and development of applicable and effective maintenance strategies has become a challenging concern for railway
