Over the past five years voice-enabled in-car GPS navigation has started to feature in new cars. Hyundai Motor drivers can receive voice recognition-supported GPS when using Apple CarPlay's Siri or Android Auto. These systems are more reliable, as they stay in the car and work as soon as the engine is switched on.

Buyers have many ways to access high-quality navigation now when buying a new car. Here's how to sort through the choices. In the recent past, the options to connect to good quality navigation in one's vehicle came down to a manufacturer-installed system in the dash, or an aftermarket system from TomTom, Garmin or another brand.

Presents a strategic perspective and design methodology that guide the process of developing digital products and services that provide 'real experience' to users. Only when the material experienced runs its course to fulfillment is it then regarded as 'real experience' that is distinctively senseful, evaluated as valuable, and harmoniously related to others. Based on the theoretical background of human experience, the book focuses on these three questions: How can we understand the current dominant designs of digital products and services? What are the user experience factors that are critical to provide the real experience? What are the important HCI design elements that can effectively support the various UX factors that are critical to real experience? Design for Experience is intended for people who are interested in the experiences behind the way we use our products and services, for example designers and students interested in interaction, visual graphics and information design or practitioners and entrepreneurs in pursuit of new products or service-based start-ups.

Apple iPhone users have been able to connect their phones to car navigation systems for years, so one may wonder what is so different about Apple CarPlay.For starters, instead of connecting to a third-party configuration CarPlay launches a display which mimics the features of the iOS user interface that we've become accustomed to. CarPlay condenses your phone's apps into those, which are compatible with the system and enable handsfree handling, which is the primary selling point of the CarPlay application. Handsfree operation enhances safety and CarPlay goes as far as disabling your iPhone screen while it is connected to the system.CarPlay can be controlled using the navigation controls, touchscreen or ideally Siri, which acts as a co-pilot which can tell you what's around you, where to go, make your calls for you, select songs and audio files to play, navigate options and apps, and send messages while you are on the go so you never have to take your eyes off the road or your hands off the wheel.

This book looks to address the following questions in a post-crisis world: How have lead firms responded to the crisis? Have they changed their traditional supply chain strategy and relocated and/or outsourced part of their production? How will those changes affect developing countries? What should be the policy responses to these changes?

Typically, communication technology breakthroughs and developments occur for the purposes of home, work, or cellular and mobile networks. Communications in transportation systems are often overlooked, yet they are equally as important. Communication in Transportation Systems brilliantly bridges theoretical knowledge and practical applications of cutting-edge technologies for communication in automotive applications. This reference source carefully covers innovative technologies which will continue to advance transportation systems. Researchers, developers, scholars, engineers, and graduate students in the transportation and automotive system, communication, electrical, and information technology fields will especially benefit from this advanced publication.

This book introduces the principles and practices in automotive systems, including modern automotive systems that incorporate the latest trends in the automobile industry. The fifteen chapters present new and innovative methods to master the complexities of the vehicle of the future. Topics like vehicle classification, structure and layouts, engines, transmissions, braking, suspension and steering are illustrated with modern concepts, such as battery-electric, hybrid electric and fuel cell vehicles and vehicle maintenance practices. Each chapter is supported with examples, illustrative figures, multiple-choice questions and review questions. Aimed at senior undergraduate and graduate students in automotive/automobile engineering, mechanical engineering, electronics engineering, this book covers the following: Construction and working details of all modern as well as fundamental automotive systems Complexites of operation and assembly of various parts of automotive systems in a simplified manner Handling of automotive systems and integration of various components for smooth functioning of the vehicle Modern topics such as battery-electric, hybrid electric and fuel cell vehicles Illustrative examples, figures, multiple-choice questions and review questions at the end of each chapter

This book is about how to develop future automotive products by applying the latest methodologies based on a systems engineering approach and by taking into account many issues facing the auto industry such as meeting government safety, emissions and fuel economy regulations, incorporating advances in new technology applications in structural materials, power trains, vehicle lighting systems, displays and telematics, and satisfying the very demanding customer. It is financially disastrous for any automotive company to create a vehicle that very few people want. To design an automotive product that will be successful in the marketplace requires carefully orchestrated teamwork of experts from many disciplines, substantial amount of resources, and application of proven techniques at the right time during the product development process. Automotive Product Development: A Systems Engineering Implementation is intended for company management personnel and graduate students in engineering, business management and other disciplines associated with the development of automotive and other complex products.

Autonomous Driving and Advanced Driver-Assistance Systems (ADAS): Applications, Development, Legal Issues, and Testing outlines the latest research related to autonomous cars and advanced driver-assistance systems, including the development, testing, and verification for real-time situations of sensor fusion, sensor placement, control algorithms, and computer vision. Features: Co-edited by an experienced roboticist and author and an experienced academic Addresses the legal aspect of autonomous driving and ADAS Presents the application of ADAS in autonomous vehicle parking systems With an infinite number of real-time possibilities that need to be addressed, the methods and the examples included in this book are a valuable source of information for academic and industrial researchers, automotive companies, and suppliers.

Communication Technology Update and Fundamentals has set the standard as the single best resource for students and professionals looking to brush up on how communication technologies have developed, grown, and converged, as well as what's in store for the future. The 15th edition is completely updated, reflecting the changes that have swept the communication industries. The first five chapters offer the communication technology fundamentals, including the ecosystem, the history, and structure—then delves into each of about two dozen technologies, including mass media, computers, consumer electronics, and networking technologies. Each chapter is written by experts who provide snapshots of the state of each individual field. Together, these updates provide a broad overview of these industries, as well as the role communication technologies play in our everyday lives. In addition to substantial updates to each chapter, the 15th edition includes: First-ever chapters on Big Data and the Internet of Things Updated user data in every chapter Projections of what each technology will become by 2031 Suggestions on how to get a job working with the technologies discussed The companion website, www.ift.com/ctu, offers updated information on the technologies covered in this text, as well as links to other resources

It is said that a little knowledge is a dangerous thing. It is a time honored cautionary statement that has suddenly acquired a new urgency. A little knowledge is dangerous, because as a force for dramatic change, knowledge today is revolutionary. More is known and being learned everyday than was ever known or learned before. As a direct result, the pace of change-and that means change in the sense of everything from business to economics, science, medicine, and politics-is beginning to accelerate much more rapidly than ever before in mankind's history. The purpose of this book then is twofold. First it is to provide a broader case for action for knowledge management-to explain what it is, why it has come about and why it is important. In this regard, we take a step back and try to understand the root causes behind the knowledge management techniques are very different, and in many ways more important, than the sort of process or productivity improvement techniques we have dealt with before. "Brains, not brawn. The success of countries, companies and people in the next century will depend on what they know and how clever they are at using this knowledge. Dale Neef has given us the best outline yet of the forces behind this extraordinary change in the world economy, the threats and opportunities we all face, and the prizes that await the winners." -Hamish McRae, author, The World in 2020, Associate editor, "The Independent", London "Dale Neef has produced a singular achievement: a book which lucidly explains the powerful driving role being played by knowledge in the emerging global economy. He provides a penetrating, all-too-rare trans-national perspective which highlights in a highly readable manner the historical, social and technological context within which this revolution is taking place. In doing so, he has stripped away the hype and jargon with which many knowledge management "experts" have clouded this structural change in the global economy. Mr. Neef offers a fascinating array of facts to support his explanations and goes on to discuss the implications of these developments for managers, for companies and for national governments. This book is a must-read for anyone actively engaged in global business today." -Jon Lowe, Former U.S. Deputy Assistant Secretary of Labor "A Little Knowledge Is a Dangerous Thing provides a very comprehensive view of the impact that the knowledge revolution on our 21st Century society. The economic dislocations that Dale Neef describes are already taking place, creating the prospect that large segments of our population may not have the skills for sustainable employment in the future. The implications of these events on the social and political fabric of our country give one great pause for reflection and concern." -William R. Brody, President, The Johns Hopkins University "Once again, Dale Neef combines just the right amounts of theory, academia and practical business experience to write a truly insightful book. In his consulting work, Mr. Neef's broad business, cultural and educational background has allowed him to analyze problems from a rich variety of perspectives. In this book, he artfully applies this skill to Knowledge Management." -James R. Breakay, Senior Vice President, Chief Information Officer, Green Tree Financial Corporation "This book is full of facts... that we need to understand if we are to draw critical conclusions about how the knowledge economy is impacting our businesses and our lives. Neef provides us with a broad perspective, concentrating not just on the US, but including insightful comparisons with Canada and Europe as well as many developing countries. The numbers provide an eye opening look at what has changed and what is changing in the knowledge economy... It is a book that challenges our thinking and...provides a much needed conceptual framework to guide the actions organizations will need to take in the knowledge economy." -Nancy M. Dixon, Associate Professor of Administrative Sciences, The George Washington University "Leveraging employee knowledge has become a strategic necessity for all "high road" companies, and organizations must optimize knowledge management techniques in the new global economy. Ford understands the need to capitalize on the knowledge of our employees in order to improve our business and enhance shareholder value in what is now a knowledge-based, global economy." -Dar Wofford, Ford Manager, Best Practice Replication
