This suggests that memory and tradition, as based almost entirely on recollections of past events, are not necessarily rooted in what actually happened but in what people perceived to have happened. This emphasis on human memory's unreliability brought both memory and tradition into disrepute among some of the philosophes, who believed that the medieval world was guided by superstition rather than reason.

About Memory and the Jesus Tradition. Alan Kirk argues that memory theory, in its social, cultural, and cognitive dimensions, is able to provide a comprehensive account of the origins and history of the Jesus tradition, one capable of displacing the moribund form-critical model. He shows that memory research gives new leverage on a range of classic problems in gospels, historical Jesus, and Christian origins scholarship.

Ask a Maori New Zealander about his or her earliest memory, though, and you might find that the childhood amnesia ended a bit sooner. A Maori's first memory might be of attending a relative's funeral at 2.5 years old. A Korean adult, on the other hand, might not remember anything before age 4. Of course, memory varies widely from person to person.

Oral tradition is information, memories, and knowledge held in common by a group of people, over many generations; it is not the same as testimony or oral history. In a general sense, "oral tradition" refers to the recall and transmission of a specific, preserved textual and cultural knowledge through vocal utterance.

through the wilderness to control understanding of the past and influence attitudes in the future. The book explores politics, collective memory and the strategies used by its priestly editors to convince the children of Israel to accept priestly rule. Leveen considers the dynamics of the transmission of tradition, memory and values in an atmosphere of crisis as a generation witnessed its parents die in the wilderness yet chose to live in the promised land in fulfilment of God's vision.

Social and cultural memory theory examines the ways communities and individuals reconstruct and commemorate their pasts in light of shared experiences and current social realities. Drawing on the methods of this emerging field, this volume both introduces memory theory to biblical scholars and restores the category "memory" to a preeminent position in research on Christian origins. In the process, the volume challenges current approaches to research problems in Christian origins, such as the history of the Gospel traditions, the birth of early Christian literature, ritual and ethics, and the historical Jesus. The essays, taken in aggregate, outline a comprehensive research agenda for examining the beginnings of Christianity and its literature and also propose a fundamentally revised model for the phenomenology of early Christian oral

tradition, assess the impact of memory theory upon historical Jesus research, establish connections between memory dynamics and the appearance of written Gospels, and assess the relationship of early Christian commemorative activities with the cultural memory of ancient Judaism. --From publisher's description.

Alan Kirk argues that memory theory, in its social, cultural, and cognitive dimensions, is able to provide a comprehensive account of the origins and history of the Jesus tradition, one capable of displacing the moribund form-critical model. He shows that memory research gives new leverage on a range of classic problems in gospels, historical Jesus, and Christian origins scholarship. This volume brings together 12 essays published between 2001 and 2016, newly revised for this edition and organized under the rubrics of: 'Memory and the Formation of the Jesus Tradition'; 'Memory and Manuscript'; 'Memory and Historical Jesus Research'; and 'Memory in 2nd Century Gospel Writing'. The introductory essay, written for this volume, argues that the old form critical model, in marginalizing memory, abandoned the one factor actually capable of accounting for the origins of the gospel tradition, its manifestation in oral and written media, and its historical trajectory.

Focusing on Christianity, Buddhism and Hinduism, this book argues that asceticism must be understood within the boundaries of tradition. It exemplifies a completely new paradigm for comparative religion which seeks to avoid a problematic universalism on the one hand and an area-specific relativism on the other. The volume's original contribution to methodology will be influential in the future development of comparative religious studies.

In today's society it is generally the written word that holds the authority. We are more likely to trust the words found in a history textbook over the version of history retold by a friend – after all, human memory is unreliable, and how can you be sure your friend hasn't embellished the facts? But before humans were writing down their knowledge, they were telling it to each other in the form of stories. The Edge of Memory celebrates the predecessor of written information – the spoken word, tales from our ancestors that have been passed down, transmitting knowledge from one generation to the next. Among the most extensive and best-analysed of these stories are from native Australian cultures. These stories conveyed both practical information and recorded history, describing a lost landscape, often featuring tales of flooding and submergence. These folk traditions are increasingly supported by hard science.

Geologists are starting to corroborate the tales through study of climatic data, sediments and land forms; the evidence was there in the stories, but until recently, nobody was listening. In this book, Patrick Nunn unravels the importance of these tales, exploring the science behind folk history from various places – including northwest Europe and India – and what it can tell us about environmental phenomena, from coastal drowning to volcanic eruptions. These stories of real events were passed across the generations, and over thousands of years, and they have broad implications for our understanding of how human societies have developed through the millennia, and ultimately how we respond collectively to changes in climate, our surroundings and the environment we live in.

William E. Engel traces a series of self-reflective organizational schemes associated with baroque artifice in the work of Herman Melville and Edgar Allan Poe. While other scholars have remarked on the influence of seventeenth-century literature on Melville and Poe, this is the first book to explore how their close readings of early modern texts influenced their decisions about compositional practice, especially as it relates to public performance and the exigencies of publication. Engel's discussion of the narrative structure and emblematic aspects of Melville's *Piazza Tales* and Poe's "The Raven" serve as case studies that demonstrate the authors' debt to the past. Focusing principally on the overlapping rhetorical and iconic assumptions of the *Art of Memory* and its relation to chiasmus, Engel avoids engaging in a simple account of what these authors read and incorporated into their own writings. Instead, through an examination of their predisposition toward an earlier model of pattern recognition, he offers fresh insight into the writers' understandings of mourning and loss, their use of allegory, and what they gained from their use of pseudonyms.

Here in one volume are two of Birger Gerhardsson's much-debated works on the transmission of tradition in Rabbinic Judaism and early Christianity. In *Memory and Manuscript* (1961), Gerhardsson explores

the way in which Jewish rabbis during the first Christian centuries preserved and passed on their sacred tradition, and he shows how early Christianity is better understood in light of how that tradition developed in Rabbinic Judaism. In *Tradition and Transmission in Early Christianity* (1964), Gerhardsson further clarifies the discussion and answers criticism of his earlier book. This Biblical Resource Series combined edition corrects and expands Gerhardsson's original works and includes a new preface by the author and a lengthy new foreword by Jacob Neusner that summarizes these works' importance and subsequent influence.
