Silviculture and Management of Complex Forests
Defining novel ecosystems in a tree plantation context. For the purpose of this paper and the better management of tree plantations, we propose that they be seen as novel socioecological systems that are defined as "physical systems of abiotic and biotic components (and their interactions) that, by virtue of human influence, differ from those that prevailed historically, having a tendency to ...

Initial growing space is of critical importance to growth and quality development of individual trees. We investigated how mortality, growth (diameter at breast height, total height), natural pruning (height to first dead and first live branch and branchiness) and stem and crown form of 24-year-old pedunculate oak (*Quercus robur* [L.]) and European ash (*Fraxinus excelsior* [L.]) were affected by ...

Growth and form of *Quercus robur* and *Fraxinus excelsior* ...
The largest operational bioenergy plantation in the Benelux countries was first established in the spring of 2010. Then, over five years (2010-2014) a novel approach has been applied, managing the plantation of fast-growing poplar and willow trees as a short-rotation coppice in two-year rotation cycles.

Pruning agroforestry areas generates significant amounts of lignocellulosic biomass every year. The energy production potential of this biomass is unclear. The aim of this research was to quantify the amount of pruning residues generated from Teak (*Tectona grandis*), which are composed by mixtures of wood and leaves. An equation from a regression model has been proposed to quantify these ...

Characterization of teak pruning waste as an energy resource
This article is a list of countries by forest area (percentage). Types of places listed include the entire planet, continents, regions, countries, provinces, states, and territories. Percentage data was calculated using information from the CIA's World Factbook 2011.
