Polyurethane Elastomers are known for their extreme resilience and have therefore begun to see use in the manufacture of a number of vehicle and machinery parts. In particular, polyurethane elastomers are often used to produce fenders, fascia, trims, interior and exterior vertical panels, doors, chassis fairings, and window surrounds.

Castable Polyurethane Elastomers are a better alternative than plastic, rubber and steel because they are formulated to resist high loads, abrasion, solvents, chemicals, water, impact, tearing and temperature extremes. Polyurethane Elastomer components have long product life spans far exceeding other materials.

'Our elastomers generate less heat when subjected to frequent, rapid deformation, therefore they do not overheat in continuous use,' said Ian Laskowitz, applications manager at the Lanxess urethane systems business unit. Because the polyurethane elastomers generate less heat when they are being used, it takes less energy to move them.

Polyurethane (PUR and PU) is a polymer composed of organic units joined by carbamate (urethane) links. While most polyurethanes are thermosetting polymers that do not melt when heated, thermoplastic polyurethanes are also available.. Polyurethane polymers are traditionally and most commonly formed by reacting a di- or triisocyanate with a polyol. Since polyurethanes contain two types of ...
