The American Presidency, updated for 2013, provides a rich journey through U.S. history. Meet the occupants of the nation's highest office from George Washington to Barack Obama. Each presidential summary includes a detailed biography, the president's signature, his vice president(s), a profile of the first lady, and timelines. Coverage of the recent 2012 presidential election and information describing the Cabinet, the White House, election results, the presidential flag, and the presidential seal history are also included. Current events such as the recent economic recession, financial reform bill, health care reform, ending the war in Iraq, Libya and Muammar al-Qaddafi, and Osama bin Laden are all chronicled in this title.

The next generation of computer system designers will be less concerned about details of processors and memories, and more concerned about the elements of a system tailored to particular applications. These designers will have a fundamental knowledge of processors and other elements in the system, but the success of their design will depend on the skills in making system-level tradeoffs that optimize the cost, performance and other attributes to meet application requirements. This book provides a new treatment of computer system design, particularly for System-on-Chip (SOC), which addresses the issues mentioned above. It begins with a global introduction, from the high-level view to the lowest common denominator (the chip itself), then moves on to the three main building blocks of an SOC (processor, memory, and interconnect). Next is an overview of what makes SOC unique (its customization ability and the applications that drive it). The final chapter presents future challenges for system design and SOC possibilities.

The Date Farmers, Carlos Ramirez and Armando Lerma of Coachella Valley often collaborate in their art, collage, drawings, and words on discarded signs. Reminiscent of Mexican Revolutionary posters, Ramirez and Lerma explore the essential reality of the roots of California past and present culture. Their art depicts Mexican American religious icons and their style resembles prison art - their lettering strong in a low rider tradition of bold sign painting. 'The Date Farmers' first book, this 96 page hard cover features paintings, illustrations, photography, and collages driven from the depths of the California desert.

Terrestrial Trunked Radio (TETRA) has become the tool to design any type of public security systems, in particular due to the strongly increased security demands for mobile systems. In this book, the authors show how TETRA can be strongly improved and these improvements will most probably be part of future TETRA standards. The areas examined include channel assignment and multiple access techniques, video transmission, wireless LAN integration, and the establishment of multiple wireless mesh networks. Since the requirements for these networks is security, the authors show that innovative techniques such as those based on chaotic signals can be used in order to maximize security. The book is a vital reference point for researchers with ambition to find the general solution for modern problems of public safety.

An examination of literary works spanning more than seven centuries, this volume studies the ascetic hero and asceticism, exploring the elusive interplay between religion, politics, and belles lettres in Russia. The first part places works including the thirteenth-century Kievan Crypt Patericon and Life of Avraamii Smolenskii, Epifanii's Life of Sergii Radonezhskii, and other lives written in the north of Russia, in the context of crucial religious doctrines such as apocalypticism and deification. The author shows how Old Russian literature plays a major cultural role in the continuing development of these doctrines on Russian soil. The second part traces a revival of the Russian fascination with themes of apocalypse and perfectibility to the nineteenth and early twentieth centuries. Morris also documents the development of a divergence in ideological approach between Russian writers who continued to view apocalypticism and deification as religious phenomena and those who used them as tools of social and political struggle. Works by Gogol, Tolstoy, Dostoevsky, Chernyshevsky, and Gorky, as well as classic novels of the socialist realist tradition are analyzed as evidence of the underlying unity of the literary manifestations of this ostensibly bifurcated intellectual tradition.
