It's quite clear that he believes in the possibility of a more compassionate society, a humanistic society, and he wants us to join him. In The Bonobo and the Atheist, de Waal (an atheist himself) calls for "a reduced role of religion, with less emphasis on the almighty God and more on human potential." What he takes issue with is dogmatism; both religious dogmatism and atheistic dogmatism.

The Bonobo And The Atheist Free

In The Bonobo and the Atheist, de Waal takes the discussion of empathy into the domain of community concern and morality and he finds this too to be a legacy of evolution. Cooperation and Competition The Age of Empathy often uses observations of chimpanzee behavior to demonstrate the emotional bonding that creates a community of social animals.

The Bonobo and the Atheist (Book) | King County Library ...

The book "The Bonobo and the Atheist: In Search of Humanism among the Primates" (2013) by Frans de Waal is an important work that investigates human morality, its origin, and principles. Throughout history politicians, philosophers, and priests had discussed this subject.

The Bonobo and the Atheist

In this lively and illuminating discussion of his landmark research, esteemed primatologist Frans de Waal argues that human morality is not imposed from above but instead comes from within. Moral behavior does not begin and end with religion but is in fact a product of evolution. For many years, de Waal has observed chimpanzees soothe distressed neighbors and bonobos share their food. Now he delivers fascinating fresh evidence for the seeds of ethical behavior in primate societies that further cements the case for the biological origins of human fairness. Interweaving vivid tales from the animal kingdom with thoughtful philosophical analysis, de Waal seeks a bottom-up explanation of morality that emphasizes our connection with animals. In doing so, de Waal explores for the first time the implications of his work for our understanding of modern religion. Whatever the role of religious moral imperatives, he sees it as a "Johnny-come-lately" role that emerged only as an addition to our natural instincts for cooperation and empathy. But unlike the dogmatic neo-atheist of his book's title, de Waal does not scorn religion per se. Instead, he draws on the long tradition of humanism exemplified by the painter Hieronymus Bosch and asks reflective readers to consider these issues from a positive perspective: What role, if any, does religion play for a well-functioning society today? And where can believers and nonbelievers alike find the inspiration to lead a good life? Rich with cultural references and anecdotes of primate behavior, The Bonobo and the Atheist engagingly builds a unique argument grounded in evolutionary biology and moral philosophy. Ever a pioneering thinker, de Waal delivers a heartening and inclusive new perspective on human nature and our struggle to find purpose in our lives.

In this thoroughly engaging book, leading primatologist and thinker Frans de Waal offers a heartening, illuminating new perspective on human nature. Bringing together his pioneering research on primate behavior, the latest findings in evolutionary biology, and insights from moral philosophy, de Waal explains that we don't need the specters of God or the law in order to act morally. Instead, our moral nature stems from our biology—specifically, our primate social emotions, which include empathy, reciprocity, and fairness. We can glimpse this in the behavior of our closest relatives in the animal kingdom: chimpanzees soothe distressed neighbors, and bonobos will voluntarily open a door to offer a companion access to their own food. Building on a wealth of evidence, de Waal reveals that morality is not dictated to us by religion or social structures. Rather, it is the inevitable product of our biological nature.

New York Times best-selling author and primatologist Frans de Waal explores the fascinating world of animal and human emotions. Frans de Waal has spent four decades at the forefront of animal research. Following up on the best-selling Are We Smart Enough to Know How Smart Animals Are?, which investigated animal intelligence, Mama's Last Hug delivers a fascinating exploration of the rich emotional lives of animals. Mama's Last Hug begins with the death of Mama, a chimpanzee matriarch who formed a deep bond with biologist Jan van Hooff. When Mama was dying, van Hooff took the unusual step of visiting her in her night cage for a last hug. Their goodbyes were filmed and went viral. Millions of people were deeply moved by the way Mama embraced the professor, welcoming him with a big smile while reassuring him by patting his neck, in a gesture often considered typically human but that is in fact common to all primates. This story and others like it form the core of de Waal's argument, showing that humans are not the only species with the capacity for love, hate, fear, shame, guilt, joy, disgust, and empathy. De Waal discusses facial expressions, the emotions behind human politics, the illusion of free will, animal sentience, and, of course, Mama's life and death. The message is one of continuity between us and other species, such as the radical proposal that emotions are like organs: we don't have a single organ that other animals don't have, and the same is true for our emotions. Mama's Last Hug opens our hearts and minds to the many ways in which humans and other animals are connected, transforming how we view the living world around us.

The bonobo, along with the chimpanzee, is one of our two closest living relatives. Their relatively narrow geographic range (south of the Congo River in the Democratic Republic of Congo) combined with the history of political instability in the region, has made their scientific study extremely difficult. In contrast, there are dozens of wild and captive sites where research has been conducted for decades with chimpanzees. Because data sets on bonobos have been so hard to obtain and so few large-scale studies have been published, the majority of researchers have treated chimpanzee data as being representative of both species. However, this misconception is now rapidly changing. With relative stability in the DRC for over a decade and a growing community of bonobos living in zoos and sanctuaries internationally, there has been an explosion of scientific interest in the bonobo with dozens of high impact publications focusing on this fascinating species. This research has revealed exactly how unique bonobos are in their brains and behavior, and reminds us why it is so important that we redouble our efforts to protect the few remaining wild populations of this iconic and highly endangered great ape species.

The first edition of Frans de Waal's Chimpanzee Politics was acclaimed not only by primatologists for its scientific achievement but also by a much broader audience of politicians, business leaders, and social psychologists for its remarkable insights into very basic human needs and behaviors. In this revised edition—featuring a new gallery of color photographs along with a new introduction and epilogue—de Waal expands and updates his story of the Arnhem colony and its continuing political upheavals. We learn the fate of many memorable chimpanzees and meet the colony's current leaders and their allies. The new edition remains a detailed and thoroughly engrossing account—of sexual rivalries and coalitions, of actions governed by intelligence rather than instinct—and it reaffirms the complex bond between humans and their closest living relatives. As we watch the chimpanzees of Arnhem behave in ways we recognize from Machiavelli (and from the nightly news), de Waal reminds us again that the roots of politics are older than humanity.

The first book to deal with all the arguments against religion and, equally important, to put forward an alternative - humanism

Kanzi the chimp, Koko the ape, singing whales, trumpeting elephants, and dolphins trained for naval service--all of them make the news each year. Members of these species learn to communicate both with their voices and with body language, and without the signals they develop, each would be an island, unable to survive on Earth. How much do we know about how animals communicate with each other or with humans? Scientific American Focus: The Language of Animals examines the sometimes subtle differences between the nature of communication and what we call "language" or "intelligence." We explore how scientists study animal communication, and we learn about various species and their ways of "talking" and passing on their own "cultural" patterns. From dancing bees and chirping crickets to schooling fish and flocking birds; from birdsong to whale song to the language of our closest relatives in the animal kingdom--the chimpanzees--these overviews of thoroughly detailed case studies are a window to understanding the constant chatter and movement of the animal kingdom.

Visit the author's Web site at www.ourinnerape.com It's no secret that humans and apes share a host of traits, from the tribal communities we form to our irrepresible curiosity. We have a common ancestor, scientists tell us, so it's natural that we act alike. But not all of these parallels are so appealing: the chimpanzee, for example, can be as vicious and manipulative as any human. Yet there's more to our shared primate heritage than just our violent streak. In Our Inner Ape, Frans de Waal, one of the world's great primatologists and a renowned expert on social behavior in apes, presents the provocative idea that our noblest qualities--generosity, kindness, altruism--are as much a part of our nature as are our baser instincts. After all, we share them with another primate: the lesser-known bonobo. As genetically similar to man as the chimpanzee, the bonobo has a temperament and a lifestyle vastly different from those of its genetic cousin. Where chimps are aggressive, territorial, and hierarchical, bonobos are gentle, loving, and erotic (sex for bonobos is as much about pleasure and social bonding as it is about reproduction). While the parallels between chimp brutality and human brutality are easy to see, de Waal suggests that the conciliatory bonobo is just as legitimate a model to study when we explore our primate heritage. He even connects humanity's desire for fairness and its morality with primate behavior, offering a view of society that contrasts markedly with the caricature people have of Darwinian evolution. It's plain that our finest qualities run deeper in our DNA than experts have previously thought. Frans de Waal has spent the last two decades studying our closest primate relations, and his observations of each species in Our Inner Ape encompass the spectrum of human behavior. This is an audacious book, an engrossing discourse that proposes thought-provoking and sometimes shocking connections among chimps, bonobos, and those most paradoxical of apes, human beings.

The Bonobo and the Atheist

Primatologist Frans de Waal and wildlife photographer Frans Lanting present the most up-to-date perspective available on the bonobo, the least known of the great apes. 75 color plates.
